Download the executable form of this driver and save it to your hard disc.Q: How to packer paths in Go? I'm trying to package the following piece of code in go and it gives me the error: panic: runtime error: invalid memory address or nil pointer dereference [signal SIGSEGV: segmentation violation code=0x1 addr=0x60 pc=0x60c431] package main import "fmt" func main(){ fmt.Println("Hello, World!") } What am I doing wrong? Edit: When I compile the piece of code above using the go tool, I get the following message: I am using openSUSE 13.1 Edit: I've installed libreadline-dev, I've set the CGO_ENABLED=1 in /etc/sysconfig/cgo, I've set the GOPATH to /usr/local/go and I'm still getting the same error... A: The problem is not that you are using Go, but that you are trying to run Go code on a system which doesn't have Go installed (or CGO_ENABLED=1 set). Since you don't know how to package Go, a single binary that depends on libreadline-dev is the way to go. // // AppDelegate.h // SPMessenger // // Created by ⍰⍰
