Notes: Reference: A series of proposed anticancer and anti-infective imidazo[1,2-b]pyridine derivatives targeting the ATP-binding pocket of p53.

The structure-activity relationships of a series of imidazo[1,2-b]pyridines has been investigated in terms of their in vitro antiproliferative activity and cytotoxicity against the MCF-7 human breast carcinoma cell line. A series of novel pyrazolo[3,4-d]pyridine, imidazo[1,5-b]pyridine, imidazo[1,2-b]pyridine, thiazolo[3,2-b]pyridine and imidazo[1,5-b]pyridine derivatives bearing a carbonyl group at the N-6 position were synthesized. The most potent antiproliferative and cytotoxic compounds of the series showed growth inhibition against the MCF-7 breast cancer cell line. Two of the compounds of this series, namely 7d and 7f, were synthesized and characterized by NMR, IR and X-ray crystallography. All of the synthesized compounds exhibited inhibitory activities against the wild-type p53 cell line, and compound 7f showed a high inhibitory activity against the p53 mutant cell line (R280K).
