(w/ bonus levels) written by johnbrown26 Note: this is not an official hack of the game, but rather a collaboration with the author of the file. Due to the nature of the hack, there are numerous copies of this file for your enjoyment (just keep in mind there is a possible risk of spoilers). This mod will be released over the next few days as the title suggests, I expect it to be available shortly. Also, upon release I will make sure to release the source for this hack as well, hopefully before release, so don't miss out on the source. How to install: 1. download this client server emulator. 2. extract client server.zip 3. extract client_server_files.zip 4. replace files in Diablo directory 5. extract Revolt.zip 6. extract original client_server_files.zip If you want to play the original game, there is an equivalent program here, currently it is a beta (I will make sure to release an official version shortly) but it works pretty good. Have fun! How to use: 1. run the client.exe file. 2. wait till the intro screen finishes loading and hit A (or tab) to play. 3. Enjoy! Special thanks to Diablo 3 Absolution (original) for providing this hack, I am not affiliated with this company in any way, just trying to make the most of a new title.
