In a CAD environment, a user can draw or edit objects on a layout (such as paper or a sheet of plastic) to create a design model. The user can then view and analyze the design model through a computer. Some years later, Autodesk began developing the first version of AutoCAD that was accessible to users without requiring the use of a terminal. This version was known as AutoCAD 1984, and was released in 1984 for the Apple II, IBM PC, and compatibles, Macintosh and Acorn computers. AutoCAD 3D (1985) In 1985, Autodesk released AutoCAD 3D, which first ran on Windows 3.1.3, and later Windows 3.1 Professional, and DOS. Autodesk released AutoCAD 3D for MS-DOS and Windows 3.1.3 in 1985. Its release coincided with the start of the Microsoft Windows 3.1 platform, leading to the virtual death of the Xerox Star, Apple's Lisa and Macintosh, and Atari's ST. In 1986, Autodesk introduced AutoCAD for Windows 2.0, for Microsoft Windows. The first version to run natively on Windows 3.x was AutoCAD 3D for Windows, followed by AutoCAD for Windows 3.x, 3.5 and 3.51, and 4.0 for Windows. Autodesk's decision to release AutoCAD for Windows natively on Windows 3.x was almost certainly due to the sheer number of units they expected to sell, given the popularity of Microsoft Windows. Autodesk's continuing strategy for Microsoft's operating system was a financial bonus. Soon, Autodesk released AutoCAD for the Apple Macintosh. This was the first CAD program to be written completely for the Macintosh platform. To promote the release, Autodesk showcased the program on "The Tonight Show with Johnny Carson". This performance featured an introduction by John Davidson, host of the show, who commented: "A lot of people are saying that 3D is almost here. Well, here it is. I have AutoCAD." Autodesk also promoted AutoCAD 3D with the tagline "3D! The Future is Now!" In 1989, Autodesk released AutoCAD for the DEC Alpha in addition to the Apple II, PC, and compatibles, Macintosh and Acorn systems. In 1990, Autodesk launched Autodesk
