Jan 1, 2012 Many variants of this example exist that are used to uniquely identify and

distinguish a mobile phone's manufactured equipment, or its variant. The serial number is a fixed alphanumeric code of 14 to 25 digits long. .
Feb 9, 2020 I've been searching for the

answer to this for the last 2 hours. I've seen many similar questions on this forum but no one answered it.

Please help. Jan 12, 2020 Hi All! This is my first post here. I was working on a very

old mobile phone
which had no SIM
card and only one
network. Its IMEI was
. ICICI Mobile
connects with ICICI
Bank for ATM
transactions and to
choose new network

(assuming service is active). This update is a minor upgrade that helps us enhance the user experience. It is just a download. Mar

14, 2020 Hey, I recently found out that a friend is stealing my

cell phone because he
found my IMEI
number on my phone.
I told him to delete it
and he said he couldn't
find it on my
computer because he
is not stealing any
device. But he is

claiming to steal my
phone because he is
selling my SIM card
for money because he
cant find the IMEI
number. May 22, 2019
How to easily convert
an Imei (which I have)
to a serial number

(which I don't have)
because I lost my SIM
card. Apr 27, 2019
Want to exchange a
mobile phone for a
refund due to a credit
card fraud. Want to
know my IMEI
number. Can I look on

my mobile phone or
can you get it from my
credit card company?

A: Short answer You
don't need the serial
number. Long answer
IMEI is used only on
the phone's carrier
network. IF you have a

SIM card, you have no other option than to find it on the SIM card. This information is on the SIM card's documentation. Serial number refers to the system ID the phone is using and is unique for

the cell phone. If you lose your SIM card, the number changes and the phone cannot be used anymore. All the time you need the serial number. Now, IMEI is not used on any network. It is

generated and stored
by the phone. The
IMEI changes only if
you change the phone.
If you lose the phone,
you have no other way

2019 In addition to being able to read a serial number (IMEI in the US), a user can unformat his or her phone as well, in the sense that a user can use tools that have nothing to do with a

serial number, but they can still read the data. Non-Apple devices will often utilize a SIM number instead of an IMEI, or won't have an IMEI. This is usually the case for services such as

Twitter, Snapchat, or Musical.ly. Typically, a mobile phone may use a different serial number (IMEI) if bought new versus previously owned.

However, if the mobile phone is

bought or sold, it can have the same serial number if the same network provider was used when the mobile phone was new and bought, but used the new handset when sold or passed along to a

third party. SIMs are like IMEIs, but they are actually more universal and are far less regulated. For the most part, a SIM can be used to connect to any carrier provider, and there are, in

general, two types of
SIMs: a Subscriber
Identity Module (SIM)
is the internal,
smartcard-sized card
that a mobile phone
uses to store
information about a
subscriber, such as

their credit card
information, phone
number and other
"personal"
information. A SIM
card may be inserted
into a mobile phone
that already contains a
valid SIM or it may be

attached to another mobile phone that does not have a valid SIM, or it may be used to store information on a SIM card of a phone not owned by the subscriber. The second type of SIM is

the Universal
Subscriber Identity
Module (USIM),
which does not have
an embedded
microprocessor, as in
the SIM card, but is a
separate smart card
(stored in an external

smart card wallet)
capable of
communicating with
the CPU in the mobile
phone. Depending on
the mobile phone
hardware
implementation, a
USIM may be inserted

directly into a mobile phone containing an existing valid USIM. A USIM may also be stored in a separate mobile phone not owned by the subscriber that is in communication with

the mobile
