DiffVue Reviews DiffVue is a comprehensive software bundle, dedicated to file management, folder comparison and HEX code changing. The application allows you to synchronize files and folders between two computers, as well as merge files, in order to remove the apparent discrepancy between them.

Comprehensive file management tool With several components, designed for specific functions, DiffVue allows you to compare files and folder contents, in order to synchronize them. DiffVue itself is a simple to use component, which can display two folders in parallel view and indicate the files that match. The program can open text documents, using the Text Editor component or other types of files, with the help of FullVue function. Other components include Unicode HEX Conversion Utility, DiffVue Shell-Menu Configuration, DiffFTP and DiffVue HEX Compare. The various file states are indicated in colors, which you may easily modify. Moreover, you can change the method of file comparison: the software supports matching files by timestamp or checksum, using the CRC32 scan method. Synchronizing functions DiffVue can perform the folder synchronization with local folders, meaning transferring any file stored in one of the two directories in both locations. The process can be started with a single mouse click, using the shortcut in the tool bar. Otherwise, you can synchronize a local folder with a different location, on a FTP server, using the DiffFTP tool. The component allows you to configure the connection to a FTP server and allows you to apply the folder synchronization. You may also create links between files or folders from different locations. HEX code editors DiffVue and DiffVue HEX Compare allow you to manage the files at HEX code levels. Not only can you perform a thorough comparison, but you may also modify certain lines in the code. Moreover, the Unicode HEX Conversion

What's New in the?

DiffVue, also called simply Diff, is a file comparing software. The program allows you to compare two files and folders and find out which files are different and which are the same. At the same time, it displays the differences between them in a tree view. The application works with files, folders and folders inside them. The user interface is quite simple to operate. It allows you to specify the first and second folders, as well as the comparison criterion. Once the operation is initiated, the program displays a screen, in which you may browse through the source and target folders. The user interface has three main sections: the menu, the comparison view and the tree view. The menu includes the tool bar, where you can control the program and the so-called fullvue function.
