What's New In?

- A sure-fire way to fight against ransomware, without interfering with your local antivirus system - Exposes weak spots on your computer and helps you protect from zero-day attacks - Provides around-the-clock protection against potential threats - Unlocks your encrypted files in seconds - Simple, easy-to-use interface - Advanced detection engine analyzes all activity on your computer - Helps protect from zero-day attacks PCBackup is a powerfull backup software which helps you back up data on a local hard drive and on the internet in real time. Is a useful utility for anyone who needs to create a secure set of backup. Many people don't know about the simple way to create a secure backup of your data, without using a complicated procedure. The PCBackup allows you to create a compact text archive file (.tpa), which is saved on your local hard drive, or send it over the Internet. You can choose any file on your system and place it in the PCBackup archive, and the system will restore your data automatically when needed. With this free package you will be able to backup your documents, images, e-books and text documents in a secure way, just by using the simple interface. By putting your archive file into a network or CD / DVD media, you can easily share it with the people you want to have it. About Me Hello to all people who are new to my blog and to the world of blog, or maybe to the world of using blogs, in general. As for my profile here, most likely you know who I am, but just in case: it is Mr. Zero Infinity, a blogger and internet publisher for the web site: and more. As for the reason for this blog and my profile here, I just like the topic of sharing and knowing new people, mostly about new programming or Internet-related technologies.
