Deep Freeze Standard 7.21.20.3447. A critical machine is a special type of machine whose performance and reliability are dependent upon the qualities of the physical contact between the tool and the component. Critical machines may be used in a variety of industries, including the railroad, oil industry, aerospace, automotive, and others. Typically, the critical machine (or at least a portion of the critical machine) is composed of one or more electromagnets that utilize permanent magnets and/or rare earth elements to separate the work piece. Unfortunately, there are not many organizations that measure the quality of the physical contact between the tool and the component, especially the magnet. Further, those organizations that do measure the quality of the physical contact are often very expensive. the "know your customer" rule (as opposed to the more general "fiduciary duty" rule). Accordingly, the motion to dismiss the Trustee's first claim for breach of contract against Prudential is granted. II. Second Claim: Negligence. As was the case with the Trustee's first claim for breach of contract, the Trustee's negligence claim against Prudential is also based on Prudential's alleged violation of its purported duty to fulfill the function of "settling claims made against its insureds." [4] See Complaint, ¶¶ 23-26. The claim again is based on the three categories of conduct ¶ failure to settle, failure to advise, and failure to properly investigate ¶ that have been outlined supra, pp. 390-391. Moreover, inasmuch as the Trustee has failed to identify any independent duty that Prudential had as the insurer to the insureds that was not owed to the insureds under the contract of insurance, the Trustee has also failed to state a claim for negligence against Prudential. Accordingly, Prudential's motion to dismiss the Trustee's second claim for negligence is granted. CONCLUSION Based on the 3e33713323
