ABI design ABI stands for Autodesk BIM 360. Autodesk announced the BIM 360 Release 3 (R3) at Autodesk World 2018. It is an extension of the AEC and architecture and engineering (A&E) product line Autodesk AEC 360. R3 features a solid model format and intelligent object interoperability. It has an immersive user interface to make collaboration easier and more fun. ABI is the result of Autodesk integrating the original AEC 360 (2010) software with the associated BIM 360 (2016) platform and tools to enable design from concept to completion of high-performance, high-efficiency building projects. ABI Version 4 (ABIv4) was announced at Autodesk World 2017, based on ABIv3. Autodesk has created ABIv4 with a technology-neutral modeling core to be able to adapt to future needs. It is easier to integrate with other applications. ABI R3 has a real-time collaboration and real-time object interoperability that have been brought to the forefront for the first time in Autodesk history. It supports digital fabrication techniques in Autodesk Design Review and is gaining increased usage among architects, engineers, contractors, owners and users. ABI R3 features: Real-time collaboration Real-time object interoperability Solid model format Intuitive design-centric user interface Enhanced collaboration environment Stakeholder project review Live renderings Live parameterization ABI design also has a single-level infrastructure with a capability to address both real-time and long-term collaboration for both internal and external users. ABI design can help to solve a wide range of problems. It features a 3D immersive UI, real-time collaboration, real-time object interoperability, a single-level infrastructure, support for digital fabrication techniques, and a capability to collaborate on large, multi-phase projects, like building interiors. ABI design has been tailored to meet the real-time, collaborative needs of today's design teams. ABI Design is a BIM project management solution that provides a collaborative experience across the entire design lifecycle. It covers the entire scope of a project from planning to design, documentation, approval and construction.
