SchoolSoft Crack [Mac/Win] [March-2022]

[Download](#)

SchoolSoft Free Download [Mac/Win]

* Schools, stores and other educational organisations often have large volumes of information to store and process, * Keeping track of everything manually would be an impossible task, * A great deal of time and effort is spent manually processing and maintaining this information, * Schools often need to share this information with other authorised users, * Schools often need to generate daily or monthly reports of their information. To support these activities SchoolsSoft is designed to store, process and share information within your organisation. Features: Data Entry-Each attribute can have a set of Key Values, or a set of Long Texts, or a List of Tags. The attributes can also have a category, and you can create a New Category or Import a New Category into the current category list. Searches-You can search for records in the database based on multiple criteria such as student name, attendance, ethnicity etc. Permissions-All users can view the data of a record, but only the owner can edit it. Reports-You can generate daily, monthly or yearly reports of a set of records. Adding a New Record-A new record can be created, edited, or moved around by any user. Version Control-There is a version control module which records changes made to a record, or a category, so that the users can revert to any previously saved version if needed. Export and Import-You can export data of a record or category to another database, or export data of a record into a text file. Also, you can import data into your database from a text file. General Information-This information includes the name of the database, version, who is using it, server information and domain name of the server. Password-You can set a password for the database so that only authorised users can access the database. Export/Import data-Users can easily import data from another database into the current database. Also, users can easily export data from the current database to another database. File Upload-Users can upload multiple files at once. The files will be stored in a directory and a unique name will be generated for each file. Scheduled Jobs-Users can schedule periodic tasks for their records, such as processing a file to create a Zip archive, or sending an email to a list of users, etc. Task List-Users can add, view and update the list of tasks. Logging-Users can set up logging for their activities. You can specify the time period

SchoolSoft can be used for managing almost all of your school's day-to-day business, including student/teacher

What's New in the SchoolSoft?

SchoolSoft, a database management system, is a comprehensive application program to manage all of your school's day to day business information. This comprehensive system has been specifically designed for use by schools, colleges and other educational organizations. It includes over 100 modules which are a step above the standard database systems that you may be using in your school. With our unique modules, you can easily keep records on students, teachers, places, properties, teachers and even their personal details, as well as all records regarding your organization. The SchoolSoft database can be easily shared with authorized users, records can be easily searched, and reports can be easily generated. What's new in this version (3.1): New Application Module: You are able to create a new Application Module from one of the pre-defined modules in this version. This module is used for storing records for the application to be created. New search and report options: You are able to search and generate reports on any information in the system. New case management module: You can create cases for the new module to be automatically initiated. New module for creating new users: You can now create new users without having to be a super user. New module for generating files: This is the new module where you can generate various files for your use. You can now add members from a mailing list. SchoolSoft Includes: Dynamic Tutor Module - This module is able to provide all of the data on your teachers and their student records and can store information such as days, classes, books, notes and any other material required for your teachers. School Portfolio - This module can be used to manage your school's books and materials. It can store information regarding your school's library, includes a book catalog and supports multi-page printing and generating report for each book. School Register - This module is used to register all of your students, faculty and staff. You can save all of their data including student details, phone numbers, courses, grades etc. All of this information can be accessed and stored on this module. Class Register - This module can be used to manage the students who are taking a class. You can store the data of the class including the type of class, lesson time, rooms, classes, discussion, homework and other materials that will be required for that class. You can also create the timetable and record all the events that will take place in this class. School Staff - This module is used to manage the information of all of your staff including their names, email, department, classes, telephone numbers and other details. The staff can be added and removed from this module. System Configure - This module can be used to modify and configure any of the settings for your system. Security - This module can be used to create user accounts and passwords. It also allows you to modify
