Q: Find out the day of the week and the hour of the day I am trying to find out the day of the week, and the hour of the day. For instance if it is Tuesday at 1:00 pm, then the day would be 3, the hour would be 1, and I would get 3 for the day of the week. I am using the following code. #include #include #include int main () { int day,hour; printf(" Enter the day, hour, year: "); scanf("%d %d %d", &day,&hour,&year); if(day == 3 && hour == 1 && year == 2011) printf("The day is 3 at 1:00 pm on the 1st of January, 2011"); else printf("The day is %d at %d:%d pm on the 1st of January, 2011",day,hour,year); return 0; } However this code doesn't work. I get some weird numbers. For instance if I enter 3:10 I get 0:0 for the day, and 0:0 for the hour. Any help would be appreciated. A: You need to check the return value of scanf to make sure that the three variables are successfully populated. A: Two problems, you are checking the wrong year and you should include math.h. It should be int main () { int day,hour; printf(" Enter the day, hour, year: "); if(!(scanf("%d %d %d", &day,&hour,&year))) { printf("bad input "); } Your if statement was wrong. You have day == 3 but what you really want to compare is day == 3 && hour == 1 && year == 2011. Q: How do I add a button to the toolbar in a storyboard? I have created a view controller with a toolbar. The toolbar is created in a storyboard. I want to add a button to the toolbar. This button has to do something with the view controller and it has to appear
