Software (55.56 MB) Description: Take full advantage of the capabilities of the DD-WRT firmware by using a bridged Network over the WAN from your existing router, while simultaneously connecting a host PC to the Internet using the router's built-in LAN functionality. No configuration required This method of connecting your PC to the Internet and your router's LAN at the same time, makes it possible for you to run applications with online databases, such as eBay and Facebook, from your PC, while browsing with your router. Full-featured application This guide also covers how to configure the router to redirect its WAN port to your router's LAN port, thereby providing a bridged link from your router's LAN port to your computer's LAN port and its built-in Ethernet port, while bypassing your computer's built-in Ethernet port. The application also covers how to access the router's configuration panel in case you need to set any configuration parameters.
