Ts Mario Demo Special ((BETTER))

Publicidade Demos Mario 2D is a new clone of Mario 2D developed by vania_mario. It's a pretty simple clone (code is around ~10KB) with a bunch of sprites and buttons, but it's highly customizable. It has a bunch of costumes and hats, but it's mostly used by me. It's a self-hosted, open source project. Currently, i'm trying to make a demo game that you can play in demo mode. It'll have a retro-NES style sprites and music. I intend to implement many of my favorite Mario 2D features, like the Super (Z) button and the 5-1-1 throw. A lot of features are already implemented, but not complete. Some bugs are also present. Any help is welcomed. Here's a summary of the features. Basic concepts New Mario Cosplay Mario levels New bosses Hats Basic concepts The project is done in a retro style. Mario has small green dots for eyes, but they can't see very well because the background is white. Walking The walk cycle of Mario is based on the Super Mario Bros theme song. Running Mario's normal run cycle is based on the Super Mario Bros theme song. Jump Mario's jump cycle is based on the Super Mario Bros theme song. Slam Mario can slam his foot into the ground to slide backwards. The speed of his slam is the size of the next bomb at the end of the level. Hitting Mario can hit the ground with his foot to make a double jump. This double jump can be canceled. Walking cycles Mario cycles through his walking patterns. Because Mario walks in the Mario Bros theme, this can be called a Mario Bros cycle. Normal walk Mario walks normally, although he can walk faster and slower. This is the'single walk' cycle. Single jump cycle Mario can perform a single jump. This jump is higher than Mario's normal jump. Double jump cycle Mario can jump once with his foot, then again with his other foot. This is the 'double jump' cycle. Sliding A sliding cycle can be triggered by hitting the ground with his foot, then pushing off the floor to slide. Jumping
