To evaluate the shear bond strength of miniscrews and to investigate the effect of screw insertion torque on the shear bond strength of miniscrews to bone in vitro. Thirty-six human maxillary incisors were divided into three groups and their root canals were endodontically prepared. Each group consisted of 12 teeth and they were assigned to one of three insertion torque values (10, 25 and 45 Ncm), and a total of 72 miniscrews were inserted to enamel surface and loaded in a shear bond strength machine with a crosshead speed of 1 mm/min. After mounting the samples on a test block, the enamel surface was trimmed perpendicular to the screw threads to form a flat surface. The shear bond strength of each screw was recorded. Samples were then prepared for histological examination. The highest shear bond strength values were recorded in the 25 and 45 Ncm groups. The mean shear bond strengths were 6.14, 6.78 and 7.61 MPa for the 10, 25 and 45 Ncm groups, respectively. The mean values were significantly different (P = 0.006). However, there was no difference between the 25 and 45 Ncm groups. In the 25 and 45 Ncm groups, there were more fibres parallel to the shear direction than in the 10 Ncm group. In all groups, there were fewer fibres perpendicular to the shear direction than in the 10 Ncm group. Overall, the data suggested that the optimal insertion torque of miniscrews should be slightly greater than 25 Ncm.Aaron Farmer, an actor and comedian best known for his role as Thud in the 2005-2006 Toronto production of Cirque du Soleil's Dralion, died on March 1, 2015.
