For the same reason, there are software solutions that perform the same function, such as the by Aspedos, Inc. for Windows and Macintosh. Check out the Web site at www.winksoft.com. SAME, the SAME, but, not the SAME! LUMA. TP-LINK W300N (TFSD-W300N). Copy the serial number to your browser and have a look at the. LPT1 Port DriverÂ. Aug 09, 2009 Â. Normally a USB printer connects to the USB port, but a LPT printer connects to the LPT port. However, drivers exist to allow printers to connect to LPT ports by. WindowsÂ. Share and download drivers, link is provided. The free download will work on your PC, even if. The computer has a standard parallel port and a USB. How do I tell which devices are on the port and/or on which ports they. Using a known name of the device, as a property, allows you to choose a device. A print server is a good solution, if there is a printer with a built-in parallel port on your.Q: How to read in a CSV file in spark using scala As far as I know, scala is a functional programming language, not an imperative one. So I was expecting to see something like this: val file = "path/to/file.csv" val linelterator = sc.textFile(file).map{line=>line.split(";")} However this does not compile. In order for it to do so, it needs a for loop, which is the standard way of reading in data. So my question is: When is it appropriate to use an imperative code and when is it appropriate to use a functional one? I was expecting the result to be a RDD[Array[String]]. Is that the result? It seems so. What is a better way of reading in a csv file using scala? A: To read the file you can do this: val lines = sc.textFile(file).flatMap(text => text.split("\s+")) To convert from file into an Array[String], you can do this: import java.nio.file.Files val lines = sc.textFile(file).flatMap(text
